

Production parity: validating the reconstruction port

Frame-matched subject-6 reconstruction: Python port versus the archived MATLAB PVI output.

Metric	Value
Frames	500
Global image correlation $\uparrow$	0.9936
Finite-mask IoU $\uparrow$	1.000
Image RMSE $\downarrow$	6.86e-4

Takeaway. Our Python port reproduces the archived MATLAB PVI reconstruction. This validates the pipeline—it says nothing about learned image quality or anatomical correctness.
