

Three-repository algorithm flow: original learned solver, production PVI, and faithful adaptation

1. Injun Lee: original 2D GCNM

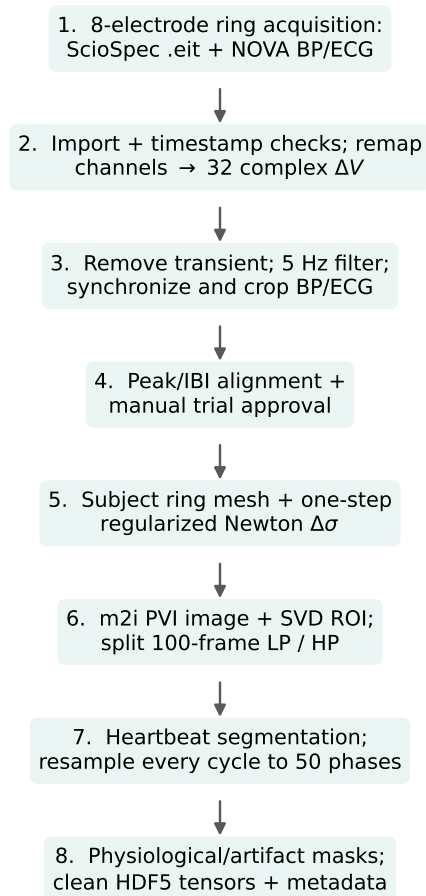

Solves absolute synthetic EIT

GCNM_training.py | GCNM_testing.py

2. Original PVI repository

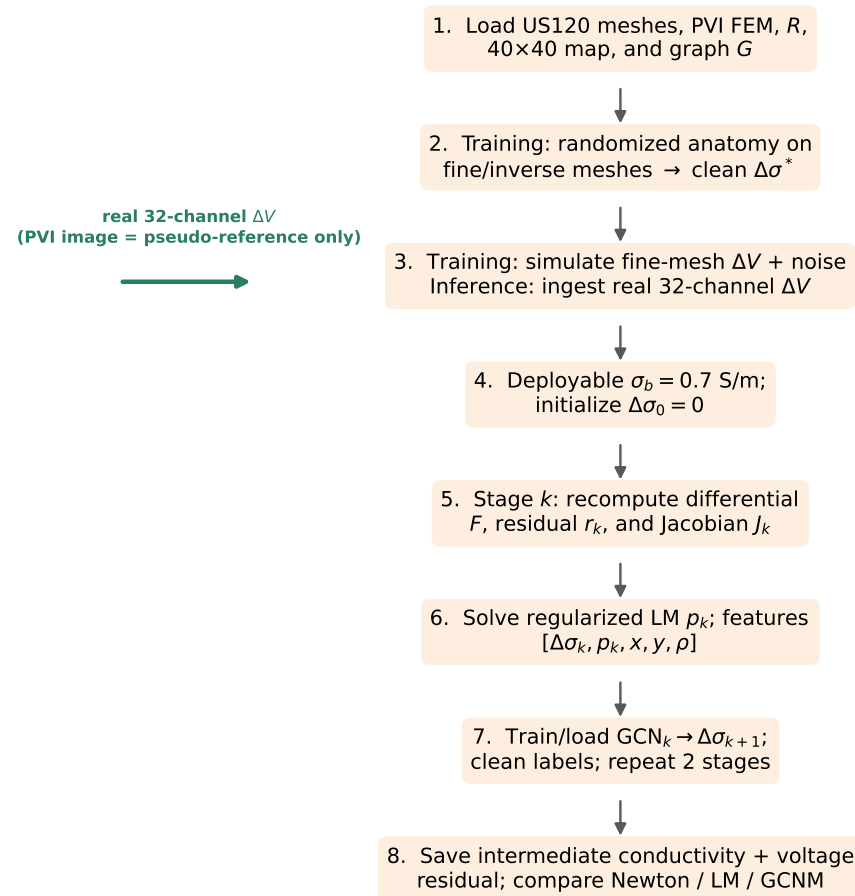

Solves production differential PVI

scionova_01--04 | pvi_inv_make / pvi_inv_solve

3. Our faithful 2D PVI-GCNM

Learns clean differential conductivity

real 32-channel ΔV
(PVI image = pseudo-reference only)

generate_anatomical_dataset.py | train/evaluate_faithful_gcnm.py
